

Akshay S A | Game Designer

+91 86183 22524 akshayarul007@gmail.com LinkedIn GitHub

Summary

Final year Game Design student focused on combat design, gameplay mechanics, level design, and player progression systems. Experienced in creating game concepts, GDDs, and interactive experiences through internships and solo projects. Passionate about souls-like and action-adventure games with a strong interest in designing challenging combat and atmospheric player experiences.

Education

B.Des in Game Design 2022–2026
Presidency University, Bangalore
CGPA: 8.23/10

PUC – Presidency PU College, Bangalore 2022
Result: Distinction

Skills

Game Design: Combat Design, Environment Design, Level Design, Gameplay Mechanics, Narrative Design, Game Balancing, UI/UX Design, Player Progression, Gameplay Loops
Tools: Unreal Engine, Unity, Blender, Maya, Photoshop, Substance Painter, Notion

Experience

Ojas neurotechnology — Game Design / Art Intern Jan 2026 – May 2026

- Gained hands on experience and collaboration with teammates
- Designed concept art and mood boards for multi-chapter interactive mobile experiences
- Created 2D and 3D assets to support visual development and gameplay presentation
- Developed game concepts and GDDs for relaxation-focused mobile game experiences

Artion Interactive — Game Design Intern July 2025 – Oct 2025

- Created game concepts and GDDs for mobile games across multiple genres including roguelite, rhythm, and relaxation
- Refined gameplay mechanics and level design systems for existing projects
- Contributed to gameplay iteration, progression flow, and overall player experience improvements
- Collaborated on developing engaging and accessible mobile gameplay experiences

Projects

Infinity Asylum — Psychological Horror Game (IGDC 2025) Sep 2025 – Dec 2025
Technologies: Unreal Engine, Blender, Substance Painter

- Designed a psychological-survival horror game set inside an infinite, looping asylum
- Created environment-driven gameplay focused on darkness, limited visibility, and spatial disorientation
- Developed light-based mechanics where enemies freeze under light and move in darkness
- Designed stealth-focused combat encounters requiring positioning, timing, and resource management

Serenikitty — Hypercasual Endless Runner Feb 2025 – Mar 2025
Technologies: Unity, Photoshop

- Designed and developed a hypercasual endless runner centered around transformation-based gameplay
- Created mechanics where players switch between girl and cat forms to navigate obstacles differently

Smart Enemy AI System — Combat AI Framework Jan 2026 – Mar 2026
Technologies: Unreal Engine

- Developed a scalable and reusable enemy AI framework designed for action-combat gameplay systems
- Created a modular base enemy system allowing multiple enemy subclasses and behavior extensions
- Implemented AI perception, damage response systems, and combat behaviors inspired by AAA-style enemy encounters
- Designed melee enemies with close-range, jump, area-of-effect, and blocking attacks
